

15 November 2006

To Whom it may Concern

Odyssey Energy Limited have requested a reference in relation to their proposal to undertake an investigation and complete designs for a number of pedestrian crossings.

Papakura DC have been working with Odyssey Energy Limited since 2003 and there is no reason why this relationship should not continue. The work they have completed covers all aspects of street lighting design, including a specific project to upgrade lighting at some 20 pedestrian crossings. The resulting designs were presented in both graphical and spreadsheet format with upgrade costs. This information has been used for our upgrade works.

Other work they have completed for Council has included:

- Development of policy for the upgrading of existing and installation of new street lighting.
- Investigation and design of car park lighting across the district.
- HISLAT® surveys and upgrade prioritisation.
- Investigation and design of lighting upgrades for intersections with a poor accident record.

We have no hesitation in recommending them for this, or any other street lighting related consultancy work.

Yours Sincerely

Jaya Rathnayaka
Operations Engineer - Services
