TO WHOM IT MAY CONCERN.

ODYSSEY ENERGY LIMITED HISLAT LIGHTING PERFORMANCE MEASUREMENT SYSTEM.

I understand Odyssey Energy Limited (O E L) is exploring ways to further commercialise its **HISLAT** street lighting performance measurement system.

Manawatu District Council engaged **OEL** to complete a **HISLAT** survey of our total inventory and received the final report in December 2003.

The results were presented in both graphical and spreadsheet format with the prioritisation report detailing renewal and upgrade costs, with priorities for attention. The information is proving useful for planning purposes, and has been used to identify areas of concern for more detailed investigation.

We think that the **HISLAT** technology provides information at a reasonable price and will prove to be a very useful strategic planning tool to -----

- 1) **Forecast costings.**
- 2) **Check energy and maintenance .**
- 3) **Check our energy requirements and CO2 gas emissions.**

Yours sincerely

Colin Giles
